

## ABOUT ME

Full Stack Web Developer, with practical experience in frontend technologies such as React, Next.js, JavaScript and TypeScript, and backend development using Python, Django REST Framework and PostgreSQL. I enjoy working across the stack — from building user-friendly interfaces to designing API logic and database structures — always applying clean code principles, good practices and teamwork. I learn fast, adapt easily to new technologies and continuously seek to improve my skills through real projects.

## FRONT END DEVELOPER

## WORK EXPERIENCE

### Currently – Freelance Full Stack Web Developer

- Web development for small businesses, delivering landing pages and management systems focused on usability and clear workflows.

### Full Stack Developer Trainee

E-Learning Startup | March – September 2023

- Back-end development of the platform using Django REST Framework (Python) and PostgreSQL.
- Front-end development using React.
- Use of development and management tools such as Docker and DBeaver.
- Worked with Agile methodologies (Scrum) and version control using GitHub.

### Front-End Web Development Practice

NoCountry | April 2024

- Simulation of real-world teamwork with the NoCountry group, where we developed an e-commerce application.
- Focused on learning and practicing soft skills, teamwork communication, collaborative workflows, and group management.

### Front-End Web Development Practice

Ademass Development Training | April – May 2024

- Simulation of real-world development work at Ademass Development Training, where we built a task management application under the mentorship of the platform's lead developers.
- The goal of these practices was to apply existing technologies, strengthen soft skills, and gain experience in team communication, collaborative methodologies, and group management.
